Safety Information

Important Information

Read these instructions carefully and look at the equipment to become familiar with the device before trying to install, operate, service, or maintain it. The following special messages may appear throughout this manual or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of either symbol to a "Danger" or "Warning" safety label indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that accompany this symbol to avoid possible injury or death.

AADANGER

DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.

Failure to follow these instructions will result in death or serious injury.

AWARNING

WARNING indicates a hazardous situation which, if not avoided, **could result** in death or serious injury.

ACAUTION

CAUTION indicates a hazardous situation which, if not avoided, **could result in** minor or moderate injury.

NOTICE

NOTICE is used to address practices not related to physical injury.

About the Document

Document Scope

This document provides instructions for installing, configuring, and operating the ELKO Smart Radiator Thermostat using the Wiser Home app. It explains how to pair the device with the hub, set room temperature manually or via app, create schedules and automations, and use voice control with Alexa or Google Home. Users can manage device settings, create moments for grouped actions, and monitor or adjust heating based on room conditions. The guide also includes steps for resetting the device, replacing batteries, and troubleshooting common issues, along with technical specifications and LED behavior indicators.

Validity Note

The characteristics of the products described in this document are intended to match the characteristics that are available on elko.no. As part of our corporate strategy for constant improvement, we may revise the content over time to enhance clarity and accuracy. If you see a difference between the characteristics in this document and the characteristics on elko.no, consider elko.no to contain the latest information.

For your safety

NOTICE

RISK OF DAMAGE TO DEVICE

- Make sure that the O-ring is seated firmly on the thread.
- The ring nut should be tightened by hand, do not use any tools. Do not tighten too hard.

Failure to follow these instructions can result in equipment damage.

General Cybersecurity Information

In recent years, the growing number of networked machines and production plants has seen a corresponding increase in the potential for cyber threats, such as unauthorized access, data breaches, and operational disruptions. You must, therefore, consider all possible cybersecurity measures to help protect assets and systems against such threats.

To help keep your Schneider Electric products secure and protected, it is in your best interest to implement the cybersecurity best practices as described in the Cybersecurity Best Practices document.

Schneider Electric provides additional information and assistance:

- Subscribe to the Schneider Electric security newsletter.
- Visit the Cybersecurity Support Portal web page to:
 - Find Security Notifications.
 - Report vulnerabilities and incidents.

About the device

The Smart Radiator Thermostat (hereinafter referred to as **Thermostat**) uses integrated temperature sensors to control the flow of water through a radiator, thereby regulating the temperature in a room. The target temperature and the switching times are set in the Wiser Home app.

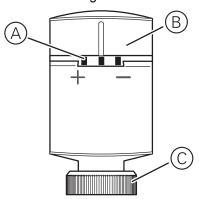

Personalize your home heating by adding a Thermostat to your Wiser Home system. This provides an effortless control to set different schedules and temperatures in different rooms, and upgrading to room-to-room heating control could save energy usage. Thermostats provide ultimate comfort, convenience and practicality.

Intended use:

- Individual room control
- Mobile control anytime, anywhere with the Wiser Home app
- Boost mode for ease and comfort.

Pairing the device with the Wiser hub

Using the Wiser Home app, pair your Thermostat with the **Wiser Hub** to access and control.

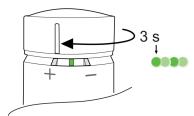

To pair the Thermostat:

- 1. On the **Home** screen, tap .
- 2. Tap **Devices** > + and tap **Climate** > **Radiator Thermostat**.

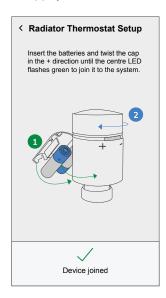

TIP:

- You can also navigate by tapping Control > + > Climate > Radiator Thermostat.
- The next screen shows the joining process of the Thermostat.

3. Twist and hold the Thermostat cap in the "+" direction. After 3 seconds, LED flashes green.

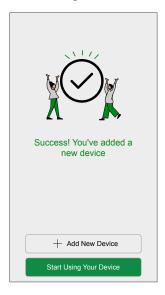

In the app, you can see the Thermostat is successfully joined.

4. Tap **Next** to enter Thermostat name and assign to an existing room or a new room.

After you pair the device, a success screen appears with the following options:

- + Add New Device: Tap to continue pairing more devices.
- Start Using Your Device: Tap to start using the paired device.

NOTE: The success screen appears only if you are logged in as a **Home Owner**.

The Thermostat is now listed on the **Control** tab under the **All** and the specific room tabs.

Configuring the device

IMPORTANT: The temperature data from the sensor will be used as an input for the heating system of the room. If a room has multiple temperature measuring devices (Room Thermostat, Smart ZB Thermostat 16 A, or SmartSensor Climate Wireless), the system calculates the average temperature measured from the devices to control the heating based on the overall temperature of the room.

For more details, refer to the Setting the device as temperature source.

- Setting the device location
- User interface lock settings
- · Identifying the device
- Calibrating the device

Setting the device location

You can add your device to any room (such as bedroom, living room, dining room etc.).

- . On the **Home** screen, tap 🖏
- Tap **Devices**, select the device from the list for which you wish to change the location.
- 3. Tap Location to open setup screen.
- 4. On the **Device Setup** screen, you can enter **New room name** (A) or select an existing room from the list (B).

TIP: If the device is already assigned, you can remove it from the existing room. Tap **Remove from Room** (C).

5. Once changes are done, tap **Submit** (D).

Related Topics

· Configuring the device (Parent Topic)

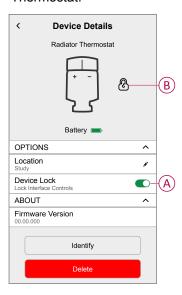

User interface lock settings

Using the Wiser Home app, you can lock the Thermostat controls (nothing will happen when the Thermostat cap is twisted in either the + or – direction). This prevents children from changing the temperatures in your room by playing with the Thermostat.

To lock or unlock the Thermostat control:

- 1. On the **Home** screen, tap 🔯.
- Tap Devices > Radiator Thermostat > Device lock toggle switch (A) to lock or unlock the Thermostat control.

TIP: When the Thermostat lock is active, a (B) will appear next to Thermostat.

Related Topics

Configuring the device (Parent Topic)

Identifying the device

Using the Wiser Home app, you can identify a Thermostat from the other available devices in the room.

To identify the Thermostat:

1. On the **Home** screen, tap .

2. Tap Devices > Radiator Thermostat > Identify (A).

NOTE:

- This feature flashes the Thermostat LEDs, so you can identify the actual device. It may take up to a minute to start and flash the Thermostat LED.
- The Thermostat LEDs will continue to flash until you tap **OK**.

Related Topics

Configuring the device (Parent Topic)

Calibrating the device

The Thermostat calibrates the radiator valve, it adjusts the pin position, automatically after 5 minutes when batteries are inserted. It takes only a few seconds to do the calibration. You can hear the motor running sound when the Thermostat starts calibrating.

Setting the room temperature manually

The room temperature can be increased/decreased manually by twisting the cap of the Thermostat.

Twist the Thermostat cap:

- In the "+" direction to increase the temperature. The red LED will light up for 5 seconds.
- In the "-" direction to lower the temperature. The blue LED will light up for 5 seconds.

When the Thermostat cap is twisted, the set-point temperature is increased/decreased by 2 °C from the current room temperature. The boost is active for 1 hour.

NOTE: If the set-point temperature is already more than 2 °C above or below the room temperature, a boost will not change the set-point temperature.

Related Topics

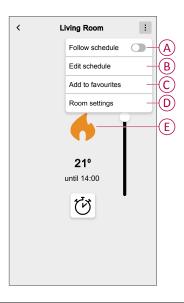

• Using the device (Parent Topic)

Operating the device using the Wiser Home app

In the Wiser Home app, the device control screen allows to switch ON/OFF the device and control it.

On the Control tab, select the thermostat.

The device control screen displays the following options:

Α	Tap the toggle switch allow the system to follow a schedule.
В	Tap to redirect you to the Schedule screen, where you can create a schedule.
С	Tap to add the device to the Favorite devices section in the Home screen. When you add it to your Favourites . To know more about Favourites , refer to the Managing Favourites topic in the respective System User Guide.
D	Tap to control various settings from the Device Settings screen.
E	Tap to manually turn the device ON/OFF.

Related Topics

• Using the device (Parent Topic)

Setting the room temperature using the app

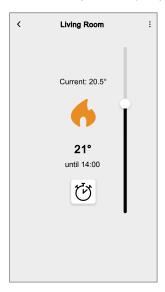

Using the Wiser Home app, you can adjust, set or boost the room temperature.

Precondition: Add a ELKO - Wiser Room Thermostat/ELKO - SmartSensor Climate Wireless in the same room where Thermostat is located.

To adjust, set or boost the room temperature:

- On the Control tab, tap All devices or a room tab where the Thermostat is located
 - a. Use the slider control on the right of the screen to adjust the temperature.

NOTE: The flame shows that the room temperature is lower than the desired temperature (set point) and so the heating is ON.

IMPORTANT:

- When the boost time is set, the system automatically increases the set-point temperature by 2 °C for the duration of the boost. Once the boost period ends, the temperature returns to the last set-point.
- Moving the slider control to the bottom of the bar activates Frost Protection mode. In this mode, the system maintains the room temperature at a constant 5 °C to prevent freezing.

TIP: You can also adjust the room temperature:

• By tapping + or - on the **Control** tab, in the **Heating** section of the concerned room to adjust its temperature.

NOTE: If you only have a single device in the Wiser System, the **Control** tab will not be visible. All functions will be accessible through the **Home** screen.

b. Tap $\begin{picture}(60,0) \put(0,0){\line(1,0){10}} \put(0,0){\line(1,0){10}}$

IMPORTANT: Once the boost time is set, the set-point temperature automatically increases by 2 °C for the set boost time. After the boost

time is over, the set-point temperature returns to the current scheduled event or to the previous set-point temperature.

NOTE: Boost can be stopped at any time by tapping the $\ensuremath{\mathfrak{C}}$ and selecting it **off**.

Related Topics

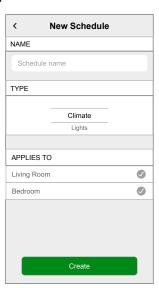

• Using the device (Parent Topic)

Creating a Schedule/Event

The device can be fully controlled and triggered by a schedule. Once the schedule is set, your system will follow the active schedule. You can create or modify the schedules at any time.

To create the schedule/event:

- 1. On the **Home** screen, tap ===.
- 2. Tap on the **Schedules** tab > +.
- 3. On the **New Schedule** page, enter the **Schedule name**, select **Type**, and select room.
- 4. Tap Create.

- 5. Select any day (A) and tap for add event:
 - Select temperature (for example 16 °C).

NOTE: When you put the slider control at the bottom of the bar for the schedule, the Frost Protection mode is activated when the schedule begins.

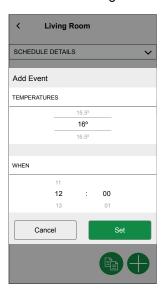

In the frost protection mode, the system maintains the room temperature at 5 °C.

Set time (for example 12:00).

NOTE: A maximum of 8 events can be created per day.

You can tap to copy the schedule from one day to other days or copy the entire schedule to a new schedule or to an existing one.

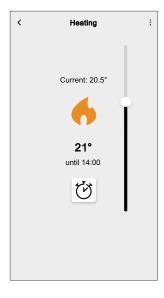

- 6. Tap Set.
- 7. On the top right corner of the screen, tap toggle switch to turn on/off the schedule.

When your system is following a schedule:

The new set point will continue to be active until the next scheduled event.

You can see the until time on the **Control** tab under the device name. The until time shows the time till which the schedule is set to ON.

When your system is not following a schedule:

Any set-point changes made with the slider will continue to be active until the next time the slider is used.

The until time disappears from the screen.

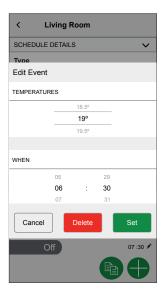

Related Topics

• Using the device (Parent Topic)

Editing Schedule/Event

To edit the schedule:

- 1. On the **Home** screen, tap ===.
- 2. Tap **Schedules** tab and select the Schedule that you want to modify.
- 3. Tap **SCHEDULE DETAILS** to do any of the following:
 - · To rename the device
 - · To change the device location
 - To delete Schedule
- 4. To edit the **EVENTS**, select a day, and tap **t** to change the time and temperature.

Related Topics

• Using the device (Parent Topic)

Built in Automation

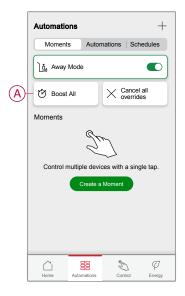

There are three built in Automation such as Boost All, Cancel all overrides and Away mode.

Related Topics

- Using the device (Parent Topic)
- Boost All
- · Cancel all overrides
- Away Mode

Boost All

You can apply a boost of +2 °C for 1 hour to every room in the system. It won't affect hot water in any way. As this is a "one-time action", you can find Boost All (A) in the "Automation" menu by clicking the "Automation" tab at the bottom of the **Home** screen.

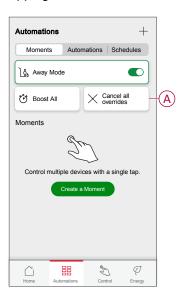

Related Topics

• Built in Automation (Parent Topic)

Cancel all overrides

The Cancel all overrides (A) will put all the heating back under 'system control' meaning that if you've selected Boost All or even if you've boosted or manually overridden a room setpoint individually, this will cancel the override and put all the rooms back to their scheduled set points. You can find it in the "Automation" menu by tapping the "Automation" tab at the bottom of the **Home** screen.

Related Topics

Built in Automation (Parent Topic)

Away Mode

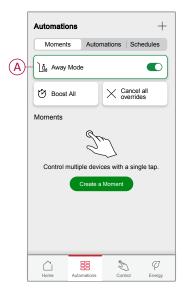

When Away Mode (A) is activated, all rooms will be set to the Away temperature (default 16 °C). It will show a checkmark in the "Automation" page when active. You can find it in the "Automation" menu by tapping the "Automation" tab at the bottom of the **Home** screen.

When Away mode is active, only rooms that have set point temperatures higher than the Away mode temperature will be affected. For example, if a given room is set to 5 °C, Away mode will not force it to the Away temperature.

While Away Mode overrides Boost and rooms that are and aren't following a schedule, it is still possible to manually change the set-point temperature and boost individual rooms after activating Away Mode. It is also possible to boost or manually turn the hot water ON.

All rooms and hot water will display their Away mode values. The hot water will be turned OFF if you have activated this option on the Away Mode screen.

NOTE: The current temperature will not be displayed when away mode is activated.

Creating a moment

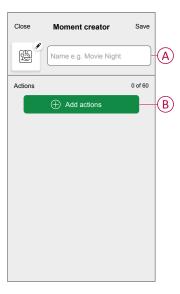

A Moment allows you to group multiple actions that are usually performed together. By using the Wiser Home app, you can create moments based on your needs.

To create a moment:

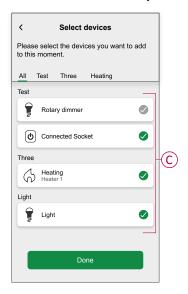

- 1. On the **Home** screen, tap
- 2. Go to **Moments** > + to create a moment.
- 3. Enter the name of the moment (A).

TIP: You can choose the cover image that best represents your moment by tapping .

4. Tap **Add actions** (B) to select the list of devices.

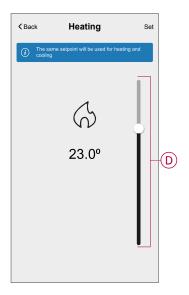

5. In the Add actions menu, you can select the devices (C).

6. Once all the device are selected, tap **Done**.

- 7. On the **Moment creator** page, tap the device to set the condition. For example, select heating.
 - Set the required temperature using sliding control (D).

NOTE: When you put the slider control (D) at the bottom of the bar for the moment, the Frost Protection mode is activated. In the frost protection mode, the system maintains the room temperature at 5 °C.

When the desired condition is set, tap Set.

8. Once all conditions are set, tap **Save**.

Once the moment is saved, it is visible on the **Moments** tab. You can tap on the moment to enable it.

TIP:

- If you want to see the created moments on the Home screen, go to Home
 > Home screen > Moments. Enable the toggle button to view moments on the Home screen.
- You can also rearrange the moments by tapping Edit from the Moments tab on the Home screen, or by tapping Automation > Moments > Reorder.

3. On the Moment editor screen, tap Delete (A) and then tap OK (B).

Related Topics

Creating a moment (Parent Topic)

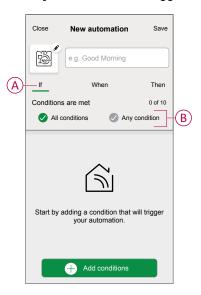

Creating an automation

An automation allows you to group multiple actions that are usually done together, triggered automatically or at scheduled times. By using the Wiser Home app, you can create automations based on your needs.

- 1. On the **Home** screen, tap
- 2. Go to **Automation** > + to create an automation.

NOTE: Maximum 10 automations can be added.

- 3. Tap **If** (A) and select any of the following conditions (B):
 - All conditions: This triggers an action only when all conditions are met.
 - Any condition: This triggers an action when at least one condition is met.

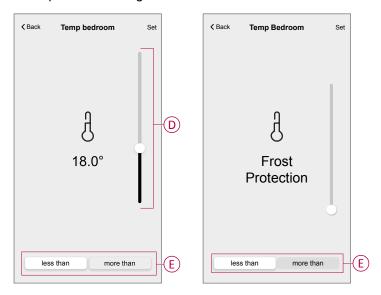

- 4. Tap Add conditions and select any of the following (C):
 - Device status change: Select a device to enable automation.
 - Away Mode: Enable/Disable away mode to trigger an action.

TIP: Away mode can also be used as a trigger to turn off the lights, dimmer or closing the shutter etc. For more information about , refer to the system user guide.

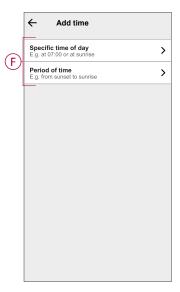

5. Tap **Device status change** > . Set the temperature using sliding bar (D) and select the condition (E) (less than / more than), then tap **Set**.

NOTE: When the slider control is set to the bottom for the automation, Frost Protection mode is automatically activated at the start of the automation. In this mode, the system maintains the room temperature at 5 °C to prevent freezing.

NOTE:

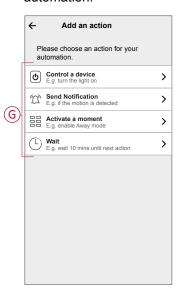

- · Maximum 10 conditions can be added.
- 6. To set a specific time for your automation, tap **When > Add time** and select any of the following (F):
 - Specific time of the day: Sunrise, Sunset, Custom.
 - Period of time: Daytime, Night time, Custom.

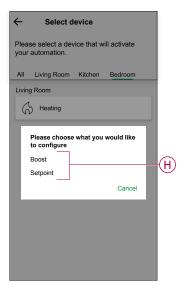

NOTE:

- · Maximum 10 entries can be added

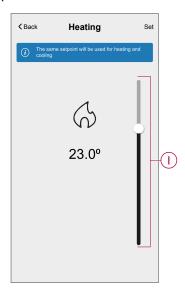

- To add an action, tap Then > Add an action and select any of the following (G):
 - Control a device: Select a devices that you want to trigger.
 - Send notification: Turn on the notification for the automation.
 - Activate a moment: Select the moment that you want to trigger.
 - Wait: This option allows you to add a delay in an automation sequence.
 You can set the wait time in increments of 1 hour and 1 minute, up to a maximum of 24 hours. This feature is useful for delaying actions within an automation.

- 8. Tap Control a device > Heating and select any of the following (H):
 - Boost: Set the duration to increase the temperature by 2 °C.
 - Setpoint: Set the desired temperature.

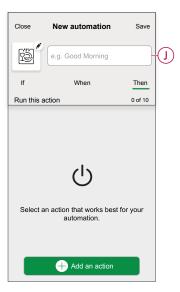

9. Tap **Setpoint**, set the required temperature using vertical sliding bar (I), then tap **Set**.

NOTE:

- Maximum 10 actions can be added.
- To remove an action, swipe it left on the action and then tap
- 10. Enter the automation name (J).

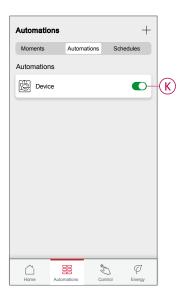

You can choose the cover image that represents your automation by tapping

11. Tap Save.

Once the automation is saved, it is visible on the **Automation** tab.

Using the (K) you can enable and disable the automation.

Example of an automation

This demonstration guides you through setting up an automation that activates heating to a set temperature of 20 °C when the room temperature drops below 18 °C.

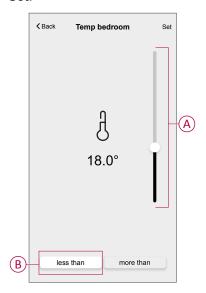

NOTE: To ensure proper heating control, you must create two separate automations:

- Automation 1: Boost the heating when a presence is detected in the room.
- \bullet Automation 2: Turn off the heater when the room temperature reaches 25 $^\circ$ C or higher.

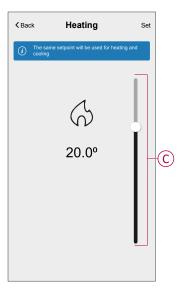

The room heater will not turn off automatically until you create another automation.

- 1. Go to **Automation** > + to create an automation.
- 2. To add a condition, tap Add Condition > Device status change > Temperature/Humidity Sensor > Temperature.

3. Set the temperature as 18 $^{\circ}$ C (A) and the condition as **less than** (B) and tap **Set**.

- 4. Read the information and tap **OK**.
- To add an action, tap Then > Add an action > Control a device > Heating > Setpoint. Set the temperature to 20 °C (C), then tap Set.

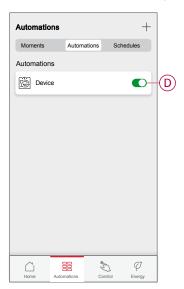

- 6. Read the information and tap **OK**.
- 7. Enter the name of the automation.

TIP: You can choose the cover image that represents your automation by tapping .

8. Tap Save.

Once the automation is saved, it is visible on the **Automation** tab.

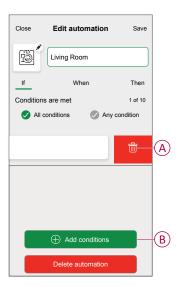

NOTE: You can enable or disable saved automations on the **Automations** tab by using \bigcirc (D).

Resetting the device

You can reset the Thermostat to factory default when it is attached to the radiator body. It can be reset manually at any time, e.g., when the Hub is replaced. To reset the Thermostat:

- 1. Twist and hold the cap in the "-" direction.
- 2. Wait for a few seconds until the center LED begins to flash red.
- 3. Hold the cap in the "-" direction until the LED flashes red 8 times.

 Release the cap; all 3 LEDs flash once indicating a successful reset of the Thermostat.

Related Topics

ELKO - Smart Radiator Thermostat (Parent Topic)

Replacing the batteries

Replace the batteries of the device when the battery is low or critically low. The center LED of the radiator thermostat will signal when the batteries need to be replaced.

LED					
Left	Meaning				
Off	Solid Red, for 1s, once per hour.	Off	Battery, low. Replace		
Off	Flashes Red, for 5s, once per minute.	Off	Batteries critically low. Replace immediately.		

Replace the batteries with 2 x 1.5V IEC LR6 (AA) Alkaline batteries. Ensure the batteries ("+" and "-" ends) are correctly oriented. The polarity is indicated on the device's terminals.

NOTICE

USE ONLY STANDARD, NON-RECHARGEABLE AA ALKALINE BATTERIES

- Do not use rechargeable batteries, Zinc Carbon, or Zinc Chloride batteries.
- · Rechargeable batteries are not optimized for Wiser device systems.

Failure to follow these instructions can result in equipment damage.

NOTE: Batteries should be disposed of according to statutory regulations. They must be recycled properly to protect the environment and reduce the waste of precious resources.

Joining	Twist and hold the cap in the + direction for 3 seconds		*		Pulses for up to 2 minutes
Joining success					Solid for 5 seconds
Joining failed	If no network is found after 2 minutes		*		Flashes for 5 seconds

Error state

State	User Interaction	Left LED	Center LED	Right LED	Duration
Low battery					Solid for 1 second (Repeated each hour)
Critical battery			*		Fast flash for 5 seconds (Repeated each minute)
No Signal	Twist the cap in the + direction to start a boost.				Fast flash for 5 seconds (Repeated)
No Signal	Twist the cap in the - direction to start a boost.				Fast flash for 5 seconds (Repeated)
No network	Twist the cap in the + or - direction to start a boost.		•		Solid with fade-out after 2 seconds. In this event, the radiator thermostat has not joined the wiser system and must either join the hub or be re-installed.

Troubleshooting

Symptom	Possible cause	Solution
The Thermostat is not responding or the app is not measuring the temperature.	Power failure or Wiser Hub generation restarted.	Post power failure, Wiser Hub generation needs up to 15 minutes to recover to normal.
The Thermostat displays offline in the app or the center LED blinks.	 Poor signal between the Wiser hub and Thermostat. The batteries need replacing in the Thermostat. The Thermostat has been reset through the human interaction at physical device. 	 Rejoin the Thermostat in the app. Replace the batteries and re-caliberate Thermostat, refer to the replacing the batteries, page 42 and calibrating the device, page 15 Re-configure the Thermostat.

Technical Data

Power supply	2 x 1.5 V IEC LR6 (AA) alkaline batteries or
	2 x HR6 NiMH batteries
Without power supply:	Connection data are retained
Temperature setting range	5 °C - 30 °C
Temperature resolution	0.5 °C
Control accuracy	< 0.8 °C at 4 °C/h
Surface temperature at place of installation	max. 93 °C
Water temperature	max. 110 °C, max. continuous 73 °C
Ambient operating temperature	0 °C to 45 °C
Storage temperature	-20 °C to 65 °C
Operating frequency	2.4 GHz
Max. radio frequency power transmitted	max. 20 mW (13 dBm)
Degree of contamination	2
Radio range	30 m free field
Specification	Value
Energy class	IV - 2%
Software class	A
Protection rating	IP 30
Dimensions (HxØ)	93 x 51 mm
